PROJECTS

Homenest — *Android Online Service Application*

Homenest is an online service app that offers services like electrician, janitor and plumber at your doorsteps. Homenest is designed from scratch using Android Studio, languages such as Java and XML, combined with the Firebase.

Library — *Sorting Book Application*

Library is an application for book lovers, where reader can add a book to different lists such as Currently Reading, Already Read, Want To Read, Favorite Books according to reader's need and edit the different lists further.

ChitChat — *Android Chat Application*

ChitChat is based on interaction between users to users with an online database. It is developed using ADT Bundle and MySQL.

Electricity Billing System — *Java Application*

This project is aimed at computerizing the interaction between the Admin and customer. Each of them is given a separate login and interaction regarding payment and complaint. It is developed using Eclipse and Oracle.

Weather App — *JavaScript Application*

This application shows the current temperature of your current location with the help of Openweathermap API.
